The present invention relates to an isolated nucleic acid encoding a melanoma differentiation associated gene-5 (Mda-5) polypeptide. Mda-5 contains a caspase recruitment domain (CARD) and a RNA helicase motif. Mda-5 is a novel interferon (IFN) inducible gene with structural similarities to RNA helicases and CARD motif containing proteins. Mda-5 is induced during terminal differentiation in human melanoma cells treated with the combination of recombinant fibroblast IFN and the antileukaemic compound mezerein (MEZ). Mda-5 is useful for identifying compounds that may induce its expression. Mda-5 is useful for treating cancer e.g., melanoma, neuroblastoma, astrocytoma, glioblastoma multiforme, cervical cancer, brondosarcoma and especially where the cancer is a cancer of the central nervous system and appotesis. The Mda-5 proteir exhibits melanocyte tissue specificity and minimises systemic toxicity. The present sequence is shuman Mda-5 protein-related DNA. Note: The present sequence is designated SEQ ID NO:2 in the main body of the specification, and has been represented in a protein formation in the specification, and has been represented in a protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  in the main

The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples, where a higher level expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic said sequences may be useful in disgnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                             Early detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ATGTCGAATGGGTATTCCACAGAGAATTTCCGCTATCTCATCTCGTGCTTCAGGGCC

creation a subject, comparing the expression level determined with the expression level of the marker gene in a biological sample from a healthy subject, and judging whether the subject has bronchial asthma or chronic obstructive pulmonary disease. The marker gene comprises: (a) a group of genes (S1) whose expression levels increase when respiratory epithelial cells are cells are stimulated with interleukin-13, or (b) a group of genes (S2) whose expression levels decrease when respiratory epithelial cells are stimulated with interleukin-13. Also described: (1) a reagant (1) for teating for bronchial asthma or chronic obstructive pulmonary disease; (2) a kit for screening for a candidate compound for a therapeutic agent to treat bronchial asthma or chronic obstructive pulmonary disease; (4) an inducer that induces bronchial asthma or chronic obstructive pulmonary disease; (5) a marker gene or an induce in induces bronchial asthma or chronic obstructive pulmonary disease; (6) a therapeutic agent for bronchial cathma or chronic obstructive pulmonary disease, comprising the compound, a marker gene or an antisene nucleic acid corresponding to a portion of the marker gene or an antisene nucleic acid corresponding to a portion of the marker gene or an antisene nucleic acid corresponding to a portion of the expression of the gene through an RNAi effect or an antibody recognising a probe has been immobilised to assay a marker gene. (1) has respiratory cor bronchial asthma or chronic obstructive pulmonary disease, on which a probe has been immobilised to assay a marker gene. (1) has respiratory conditions and antisathmatic activities, and can be used in gene therapy. The method is useful for testing for or screening for a therapeutic agent invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CTGCTGCTGAGCACCTTGGAGCAGGACAATGGCCTCTGGGATGGACGCAGATGTTCGTG 474

The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or lygases. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of a wide range of disorders including hyperproliferative disorders (e.g. cancer), immunodeficiency disorders (e.g. AIDS) autcommune disorders (e.g. arthritis), neurological disorders (e.g. Albamatory disorders (e.g. asthma), cardiovascular disorders (e.g. therbosicals), blood-related disorders (e.g. haemophilia), reproductive disorders (e.g. infertility) and infectious disorders (e.g. Influenza). The polymucleotides of the infections also be used in gene therapy. AAS40785-AAS41684 represent cDNA sequences encoding for the novel human enzyme polypeptides of the invention. Note: The sequence data for this patent did not form part of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel polypeptides and polynucleotides useful for diagnosing, preventing,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         treating neural, immune system, muscular, reproductive, pulmonary, cardiovascular, renal, proliferative disorders and cancerous diseases.

The present invention relates to human RH116 (see AAM47798). RH116 is a li6kDa protein and has homology to RNA helicases (DEXH box). RH116 and ists coding sequence are useful for treating cancer; acute or chronic infections (especially by HIV or hepatitis B or C); inherited genetic diseases; (auto)immune diseases (particularly rheumatism, arthritis, arteriosclerosis, osteoporosis and diabetes, but many others listed) and to prevent graft rejection. RH116 and its coding sequence are also useful for inducing, or increasing, the immune response to a vaccine. The

                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                       The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM8642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polymucleotides are useful in gene therapy. A composition containing a polypeptide or polymucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous system central nervous system diseases, such as localised neuropathies and central nervous system disease, such as Alzheimer's Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as Immune system suppression, and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, acancer diagnosis and therapy, drug screening, assays for receptor activity, activities and inflammation, leukeemias and contains and assays for receptor activity, activities and inflammation, leukeemias and contains and significant of the contains and contains and activity attains and therapy, and procession and activity activities and therapy and inflammation, leukeemias and contains and activity and activity activities and therapy for activity and activity and activity and activity and activity and activity and activity and activity activities and activity and activity and activity and activity and activity and activity activities and activity and activity activities and activity and activity activities and activity and activity activities and activity and activity activities are activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               438
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          717

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642.AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral neuropathy and localised neuropathies and central nervous system diseases, such as parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, arncer diseases and inclammation, leukaemias and therapy, drug screening, assays for receptor activity, arncer disease and inflammation, leukaemias and C. C.N. & disease.

The ADC30889) and the polypeptides they encode (ADC30890-ADC31860). The invention also relates to nucleic acid sequences over 99$ identical with the novel human cDNAs. The invention additionally encompasses expression vectors and host cells comprising a mucleic acid of the invention; the recombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention; an antibody completed or polypeptides of the invention; and methods of identifying a compound which binds to a polypeptide of the invention. The invention further discloses methods of peventing, treating or ampliorating a medical condition; kits comprising polypuciaectide probes and/or monoclonal antibodies for carrying out the methods of the invention or ampliorating methods for the identification of compounds that modulate the comprise sequences corresponding to the converse of the invention or expression or activity of the polymucleotide and/or polypeptide; and 767 contig sequences corresponding to the cDNA sequences of the invention are contig sequences corresponding to the cDNA sequences of the invention are contiguently in diagnostics, drug screening, forensics, gene mapping, in the contiguence of the invention are contiguently in diagnostics, drug screening, forensics, gene mapping, in the contiguence of the invention are contage. They are contage of the invention are contage. They are also used for treating diseases such as Parkinson's disease. Alzheimer's

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        871
             disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or cancer. The nucleic acids may also be used as hybridisation probes or primers, and in the recombinant production of a protein. The polypeptides are also useful in generating antibodies, as molecular weight markers, and as food supplements. The present sequence represents a human contig sequence used in an example of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fig. who.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        791
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            612
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             132

The invention relates to a composition comprising a plurality of CDNAs for detecting the altered expression of genes in an immunological cordetecting the altered expression of genes in an immunological cordetecting the invention also relates to a method of diagnosing or monitoring the treatment of an immunopathological condition in a sample, comprising obtaining nucleic acids from a sample, contacting the nucleic acids of the sample with an array comprising the plurality of CDNAs under conditions to form one or more hybridisation complexes and comparing the levels of the detected to hybridisation complexes with the level of hybridisation complexes with the level of hybridisation complexes or comprising a mon-diseased sample, where an altered level of the detected hybridisation complexes correlates with the presence of an immunopathological condition. Also disclosed are an expression profile comprising an incoarray and a plurality of detectable complexes and a comprising an immunopathology, such as Crohn's disease, asthma, conference of an immunopathology, such as Crohn's disease, asthma, the diagnosis of an immunopathology, such as Crohn's disease, asthma, collecative colitis, hypereosinophilia, irritable bowel syndrome, concearthritis, theumatoid arthritis or acute monocytic leukaemia, and in identifying agents for the treatment of the diseases. The microarray may also be used in drug discovery and development, toxicological and carcinogenicity studies, forensics or pharmacogenomics. The composition of may also be used in purification of a subpopulation of may also be used in purification of a subpopulation of may also be used in purification of a subpopulation of may also be used in purification of a subpopulation of may also be used in purification of a subpopulation of may also be used in the printing a plant of the printing a plant of the printing a plant of the printing of the printing of the printing of the printing of the printing of the printing of the printing of the printing of the printing of the pr

Sequence 48, Application US/09023655;
Patent No. 6607879
GENERAL INPORMATION:
APPLICANT: Cocks, Benjamin G.
APPLICANT: Susan G. Stuart
APPLICANT: Osffrey J. Sellhamer
ITILE OF INVENTION: COMPOSITION FOR THE DETECTION OF BLOOD CELL GENE
INUMBER OF SEQUENCES: 1508
CORRESPONDENCE ADDRESS:
ADDRESSER: INCTTE PHARMACEUTICALS, INC.
STREET: 3174 PORTER DRIVE
CITY: PALO ALTO
STRATE: CALLFORNIA
COUNTRY: USA

Sequence 11, Application US/09221268D

Patent No. 6720408

Barent No. 6720408

GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID MOLECULES WHICH SPECIFICALLY HYBRIDIZE WITH
TITLE OF INVENTION: NUCLEIC ACID SEQUENCE ENCODING MDA-7 AND PHARMACEUTICAL COMPOSI
FILE REFERENCE: A34534-A-A (070050.1637)
CURRENT APPLICATION NUMBER: US/09/221,268D
CURRENT FILING DATE: 1994-09-30
PRIOR PILING DATE: 1994-09-30
PRIOR APPLICATION NUMBER: 08/316,537
PRIOR FILING DATE: 1994-09-30
PRIOR PRIOR APPLICATION NUMBER: 08/143,576
PRIOR PILING DATE: 1993-10-27
NUMBER OF SEQ ID NOS: 30
SOFTWARE FastSEQ for Windows Version 4.0
SEQ ID NO 11
LENGTH: 193

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
